ABSEL | Sulzer

Sulzer is a global leader in fluid engineering. We specialize in pumping, agitation, mixing, separation and application technologies for fluids of all types.

Because life is fluid - flow control and applicators | Sulzer

The Pump curve also displays the Pump model, the Pump size and number of stages for multi-stage pumps. The Pump curve shows the Flowrate range on the horizontal scale. As standard the Flowrate is from zero flow to 20% past the Best Efficiency Flow. The first point on the curve at zero flow is referred to as "Shut Off" and the last point at maximum flow is "Run Out". The vertical scale on the main curve is always differential head.

A pump curve is a graphical representation of the performance characteristics of a pump. A pump curve provides a wealth of information regarding the performance capabilities of a pump. Information is plotted on an x-y graph where the x-axis is measured in units of flow and the y-axis is measured in units of head, power, and NPSHr.

How to Read a Pump Curve | Intro to Pumps

Main Applications The HPH and HPL are multistage ring section pumps, designed for operation at two or four pole motor speed. They are suitable for pumping clear or slightly polluted water with abrasive particles and particularly fits the following
